

TANISH SHAIKH

Data Science & Applied AI Analyst

+91 9898325398 | tanishshaikh04@gmail.com | [linkedin.com/in/tanish-shaikh/](https://www.linkedin.com/in/tanish-shaikh/) | github.com/tanishshaikh

EDUCATION

Swarnim Startup and Innovation University, Ahmedabad

Jul 2024 – Present

B.Tech in Information Technology | CGPA: 8.7 | Currently in 6th Semester

Silver Oak University, Ahmedabad

Jul 2022 – Feb 2024

B.Tech in Information Technology | CGPA: 8.5

Fingertips

Mar 2024 – Aug 2024

Data Science Pro Program

TECHNICAL SKILLS

Languages: Python, SQL, Basic HTML

Frameworks & Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn

Data & BI Tools: Excel, Power BI, Tableau, MySQL, DBeaver

Platforms: Jupyter Notebook, VS Code, Google Colab

AI Tools: ChatGPT, Gemini, GitHub Copilot, Prompt Engineering

Other Tools: GitHub, Canva, WordPress, PowerPoint

Soft Skills: Critical Thinking, Prompt Writing, Social Media Management, Problem Solving

WORK EXPERIENCE

Analytics Career Connect — Founder's Office — Data Department

Jul 2025 – Nov 2025

- Supporting the setup and management of the Data Department, collaborating on strategy, live projects, and team operations.
- Hands-on work with dashboards, reports, and statistical models to drive data-informed decisions.

Analytics Career Connect — Data Analyst Intern

Jun 2025 – Jul 2025

- Worked on data structuring, visualization, and real-time analytics across hands-on business projects.
- Built dashboards and statistical models to support business decision-making and performance tracking.

Outlier.AI (Remote) — AI Model Trainer & Reviewer (Freelancer)

Nov 2024 – Apr 2025

- Evaluated and improved LLM-generated solutions through step-by-step reasoning validation and correction.
- Identified error points in model outputs and provided targeted fixes, enabling iterative regeneration and improved reasoning accuracy.
- Contributed to a human-in-the-loop feedback pipeline, supporting model refinement similar to supervised fine-tuning and RLHF workflows.
- Reviewed and validated peer contributions to ensure high-quality training data and consistency.

PROJECTS

Financial Fraud Detection

Jan 2025

- Built classification models on imbalanced credit card fraud dataset; achieved ~99.9% accuracy, precision 0.90–0.98, recall 0.80–0.85.
- Applied SMOTE to handle severe class imbalance; evaluated using F1-score and AUPRC for reliable fraud signal detection.
- Engineered features from transaction attributes; XGBoost delivered best performance across the precision-recall tradeoff.

Advance Amazon & Sales Power BI Dashboard

Dec 2024

- Built Power BI dashboards tracking ~₹2.30M total revenue, 38,000+ units sold, 3,000–5,000 orders, and a 12.4% profit margin.
- Cleaned and modeled sales data enabling dynamic drill-down analysis; monitored return rates ranging 10–23% for operational insights.
- Integrated Power BI AI visuals, automation, and API features to enhance data storytelling and streamline reporting workflows.

Netflix Data Analysis Using SQL

Nov 2024

- Processed 8,000+ records using complex SQL queries; identified content mix of ~70% movies and ~30% TV shows.
- Found US, India, and UK as top producing countries; uncovered genre distribution and release pattern trends.
- Delivered data-driven content strategy recommendations addressing key business questions around production and audience preferences.

Home Price Prediction

Aug 2024

- Built and compared Linear Regression, Lasso, and Ridge models; achieved R^2 of 0.86–0.88 after hyperparameter tuning.
- Applied regularization to manage multicollinearity; engineered features from property count, distance, and area metrics.
- Identified key price drivers via feature importance analysis; delivered insights for real estate decision-making.

Insurance Price Prediction

Jul 2024

- Built Random Forest regression model to estimate annual premiums; achieved R^2 score of ~0.87 on test data.
- Conducted EDA on demographic and health features; identified smoking status and BMI as the strongest cost predictors.
- Processed real-world dataset with missing value handling, categorical encoding, and numerical feature normalization.

Flight Fare Regression

Jun 2024

- Built Random Forest Regressor to predict flight fares; achieved R^2 of ~0.81, MAE of ~₹1,177, RMSE of ~₹1,924 after tuning.
- Engineered temporal features (journey date, duration) and applied one-hot encoding to categorical variables.
- Compared Random Forest, XGBoost, and Gradient Boosting; selected best model via cross-validation on R^2 and RMSE.

Tableau Dashboards — Zomato, Blinkit & Sales

Apr 2024

- Built interactive Tableau dashboards tracking ~\$2.3M total revenue, ~\$286K profit, and a 12.4% overall profit margin.
- Integrated Zomato and Blinkit sales data; developed clickable dashboards with dynamic filters for cross-platform business insights.
